RINCON CONSULTANTS

Hazardous Material Spill Response

Rapid Support for Pipeline and Hazardous Material Incidents

Rincon provides comprehensive environmental response and remediation services for pipeline spills, emergency repairs, and hazardous material releases. We specialize in spill assessment; soil, sediment, groundwater, and surface water sampling; emergency permitting; and biological monitoring to support pipeline operators and municipalities. We work closely with regulatory agencies such as the USACE, RWQCB, CDFW, and BLM to secure permits, guide compliant cleanup actions, and lay the groundwork for long-term monitoring and remediation.

A Rincon Service

Our Differentiators

- Rapid, locally grounded spill response backed by decades of work across California's coastal and inland regions.
- Integrated biological, cultural, and regulatory expertise that streamlines emergency permitting and compliance.
- End-to-end environmental support—from initial assessment through remediation and closure documentation.

Solutions Delivered

Rapid Incident Response

We mobilize quickly to assess spill conditions, collect soil/sediment/groundwater samples, and document site conditions so cleanup can begin without delay.

Contaminated Material Removal and Verification

We oversee excavation, removal, and proper handling of contaminated soils and sediments, followed by confirmation sampling to ensure cleanup targets are met.

Environmental Protection During Cleanup

Rincon biologists and cultural resource specialists conduct pre-construction surveys, habitat/species monitoring, and cultural protection measures to safeguard sensitive resources during field activities.

Clear Documentation and Closure Support

Beyond daily field notes and post-response reporting, our team also supports the development of long-term monitoring and remediation plans to ensure continued regulatory compliance and effective site recovery.

Regulatory Navigation and Emergency Permitting

Our team coordinates directly with USACE, RWQCB, CDFW, BLM, and local jurisdictions to secure emergency authorizations and maintain compliance throughout response efforts.

End-to-End Environmental Support

With a multidisciplinary team familiar with Central and Southern California's environmental and regulatory landscape, we deliver complete support from the initial spill assessment through final compliance reporting.
