RINCON CONSULTANTS

Wildfire Response

Post-Fire Environmental Assessment and Compliance

Rincon provides comprehensive wildfire response services, including environmental compliance, debris removal, permitting, and post-fire recovery. We support utilities, municipalities, and private entities in assessing fire impacts, securing regulatory approvals, and managing cleanup efforts for major disasters like the Thomas, Woolsey, and Alisal Fires. Through specialized compliance tracking and GIS integration, we streamline recovery while ensuring regulatory adherence.

Our Differentiators

- Mobilize multidisciplinary teams within days to accelerate recovery.
- Streamline environmental compliance and permitting so utility and construction work can proceed without delay.
- Deliver integrated and customized GIS dashboards with real-time visibility to support faster decision-making.

A Rincon Service

Step-By-Step Framework

Mobilize Quickly

- Deploy multi-disciplinary teams in days, not weeks
- Provide immediate planning support while scopes and budgets are still being defined
- Establish a clear point of contact and communication workflow

Conduct Regional Constraints Screening

- Assess fire-impacted areas for biological, jurisdictional, cultural, and paleontological resource sensitivities
- Identify permitting triggers and potential delays early
- Deliver GIS-based summary maps and desktop-level documentation

Review and Clear Site-Specific Work Orders

- Evaluate utility or construction work packages for environmental compliance
- Develop mitigation measure packages tied to resource constraints
- Track status of all reviews to align with field scheduling

Support Regulatory Strategy and Permitting

- Recommend appropriate agency pathways (e.g., emergency notifications, standard permits)
- Coordinate with resource agencies as needed
- Document and track measures for field implementation

Integrate Data Tools for Project Oversight

- Build GIS viewers and dashboards linked to real-time project status
- Provide clients with spatial and tabular tracking of work order progress
- Enable field teams, planners, and leadership to view constraints and clearance status in one system
